

# EGOS Sustainable Travel Advice to Vienna

## Before you Travel

Reduce your carbon footprint and ask yourself this one question before booking your next trip:

### If you need to travel

- Take the day or night train if available.
- Take the bus if available.
- Fly direct and fly economy.
- Choose the most efficient aircraft.
- Book a hotel close to the meeting location.
- Choose an eco-friendly hotel.
- If necessary, rent electric vehicles, not hybrid ones.
- Use public transport instead of cabs.

#### Note:

To date, Google Flight is the only reliable CO<sub>2</sub> calculator publicly available. Use it to find the least polluting flight to your destination!

### If you participate online

- Turn off your camera when not speaking. Cameras on average can consume 10 times more CO<sub>2</sub>.

## Our Recommendations for Getting to Vienna

### If you have to fly...

Origin	Best Option	Savings estimation for a return trip compared to average of all other airlines (kg CO2)
Mexico	Air France or British	1700
Sydney	Etihad	1500
Melbourne	Qatar, then Etihad	1600
San Francisco	Air France or British	1300
LA	British Airways	900
New York	Austrian from EWR	500
Tokyo	All Nippon	500
Rio de Janeiro	Lufthansa	400
Capetown	KLM	400
Tel Aviv	Austrian	90

### In Europe, consider taking the train

Origin	Savings estimation for a return trip compared to flying airlines (kg CO2)
Nuremberg	150
Munich	100
Budapest	65

Taking a train is on average **20x more carbon efficient** than taking a flight.

Ex on a **Munich-Vienna** trip, you will save more than **100kg of CO<sub>2</sub>** by taking a train. This is the equivalent of 620km driven

## Choosing the Best Aircraft – e.g. Melbourne-Vienna

✓ When flying from Melbourne to Sydney, **Qatar Airways** is clearly the best option, since operating with 2 efficient A350. Worst option is **Emirates** flying with less efficient A380 and B777.

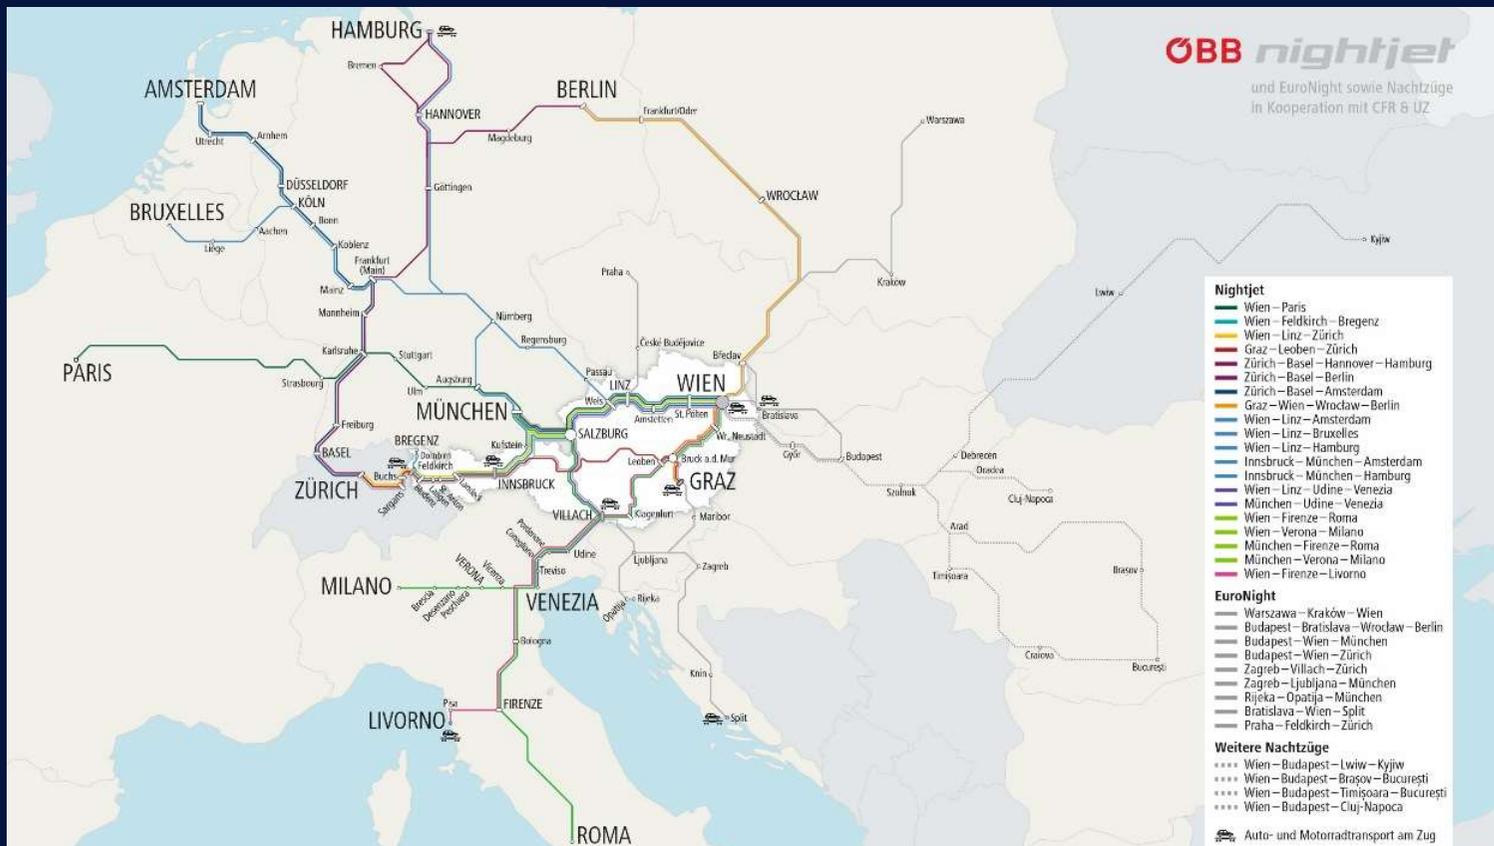

✓ Each individual trip with Qatar Airways saves **1,2 tons of CO<sub>2</sub>** vs the same trip with Emirates (in Economy cabin). This is the equivalent of 7,500 km driven.

**Qatar Airways via Doha: 3,4 tons of CO<sub>2</sub> RT**

**Emirates via Dubai: 4,6 tons of CO<sub>2</sub> RT**

see also <https://www.seat61.com> and <https://www.thetrainline.com>

## Eco-Certified Hotels in Vienna

- ✓ Several eco-certified or “green” hotels exist in Vienna, 3 of them walking distance from the University (see next slide)
- ✓ 3 eco-certified hotels are close to the main train station – this can also be an option, although public transport does not look perfectly convenient (otherwise 20mn walk)
- ✓ Hotels flagged in green are eco-certified. But we also recommend some non-certified hotels (in blue) that show remarkable initiative on sustainability

## The Closest “Green” Hotels to WU Campus

### HOTEL WILHELMSHOF\*\*\*\*

- Electricity supply exclusively from renewable sources
- 50% of the energy used to heat water comes from hotel itself
- Food mostly local & organic (rum arrives with sailboat !)

### HENRIETTE STADT HOTEL\*\*\*\* (EX CAPRI)

- Electricity supply exclusively from renewable sources
- No single-item plastic
- Bike rental
- Food mostly local & organic

### MAGDAS HOTEL\*\*\*

- Known as the 1<sup>st</sup> social business hotel in Austria
- Run by 12 apprentices with a refugee background and 25 industry professionals

## During Your Trip

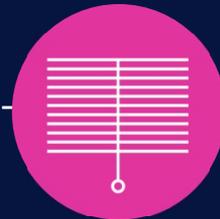

During your conference trip, keep these factors in mind:

Use public transport, bike or walk to your destinations.

Reduce your consumption of red meat and eat more plant-based foods while traveling.

Close the blinds in your hotel room to keep the heat in or out.

Go plastic free by bringing your own water bottle and toiletries to avoid using the hotel provisions.

Save water and ask your hotel not to collect towels and sheets everyday for cleaning.

### Did you know ?

- Beef & lamb production generates 8% of worldwide GHG emissions i.e. twice more than the aviation industry. You do not have to become vegetarian, but you may consider reducing meat consumption.
- If you need to drive, choose an electrical vehicle, that saves 50-80% CO<sub>2</sub> over the full life cycle vs a petrol vehicle. But do not choose large vehicle (electrical or not). Do not choose hybrid either (often large and less efficient).

# Why CO<sub>2</sub> Offsetting is not the Best Option

Offsetting is, by definition, uncertain: a certain CO<sub>2</sub> increase (flight) is “exchanged” with an uncertain CO<sub>2</sub> decrease.

Offsetting is often insufficient and should not be a part of the debate between traveling and not traveling.

**If you offset, choose wisely to increase your impact by...**

**Tactful tip:**

Never trust a supplier that promises you “carbon neutrality”. This concept is now forbidden in some countries (e.g. France). If you travel, you will pollute and can’t be carbon neutral. You can simply mitigate your carbon impact (but not compensate) by choosing reliable offsetting projects.
